Excerpt: .kept wet by means of very cold water, a constant current of cold air being at the same time made to pass over them. The pipe D leading from the retort is several feet long, and is advantageously passed through a wooden screen, in order that the radiated heat of the retort and brickwork of the furnace, may be intercepted as much as possible. There are two methods of carrying out the process. In one the dry pulverulent ingredients are mixed together, and the resulting gas passes over into the water placed in the receivers. In the other the lime is made into a pap with water, and the ammonia salt, in coarse powder, being added to it, the whole is rapidly blended together, before closing the retort and applying heat. In either case a proportionate quantity of water is put into the condensers,...
