RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 102 pages. Dimensions: 9.7in. x 7.4in. x 0.2in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1905 Excerpt: . . . organs sui generis, as Bower and others suppose, but are parts or segments of the primitive leaf; and, as we know in the case of pollen-sacs and ovules, may become transformed into ordinary vegetative tissue. Also we see the same two embryonal quadrants which, in the Bryophyte, produce the sporogonial capsule, in the vascular plant producing purely vegetative organs. The primitive leaf and primitive sporangium, therefore, were one and the same thing, viz. , the original and simple (not the modern, complex structures, e. g. of *Polytrichum*) sporogonial capsule of the primeval Bryophyte. He who sees deeply and clearly enough perceives how very much more natural and easier this theory of Celakovskys is, than those either of Bower or of the adherents of the homologous view, for in the process of its application, it does not violate, as both the other theories appear to do, the basic first principles of morphology. These demand that, if any two organs or structures are to be regarded as homologous, it must be shewn that the two bore a common origin, and that there exists an easy gradation in the characters of form and structure between the two; in other words, that the one can arise by means of easy transformation of the other. I maintain that these conditions are afforded in the embryological data cited above, but that the theories of Bower and of the supporters of the homologous theory are without them. The latter have never brought forward a...
