

# A Treatise on the Analytical Dynamics of Particles and Rigid Bodies With an Introduction to the Problem of Three Bodies

Filesize: 2.37 MB

## ***Reviews***

*This ebook is very gripping and fascinating. Sure, it is engage in, nevertheless an amazing and interesting literature. It is extremely difficult to leave it before concluding, once you begin to read the book.*

*(Ms. Ora Buckridge)*

## A TREATISE ON THE ANALYTICAL DYNAMICS OF PARTICLES AND RIGID BODIES WITH AN INTRODUCTION TO THE PROBLEM OF THREE BODIES

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 108 pages. Dimensions: 9.7in. x 7.5in. x 0.2in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1904 Excerpt: . . . vertical and vertex downwards, shew that the vibration-period is  $\sqrt{\frac{2l}{g}}$  where  $l$  is the semi-latus rectum of the paraboloid. (iii) To determine the vibrations about steady motion of a top on a perfectly rough plane. Let  $A$  denote the moment of inertia of the top about a line through its apex perpendicular to its axis of symmetry, and let  $\theta$  denote the angle made by the axis with the vertical,  $M$  the mass of the top, and  $h$  the distance of its centre of gravity from its apex: then we have seen ( 71) that after ignoring the Eulerian angles  $\psi$  and  $\phi$ , the angle  $\theta$  is determined by solving the dynamical system defined by the kinetic potential  $R = \frac{1}{2} A \dot{\theta}^2 - Mgh \cos \theta$ , where  $a$  and  $b$  are constants depending on the initial circumstances of the motion. Let  $\alpha$ ,  $n$ , be the values of  $\theta$  and  $\dot{\theta}$  respectively in the steady motion, so ( 72) we have  $An^2 \cos \alpha = Mgh \sin \alpha$ , where  $r$  is a small quantity, and expand  $R$  in ascending powers of  $x$ , neglecting powers of  $x$  above the second and eliminating  $\alpha$  and  $\theta$  by use of the last two equations; we thus obtain for  $R$  the value  $R = \frac{1}{2} A x^2 - Mgh \sin^2 \alpha (n \cos \alpha - Mgh/A)$  rif. The equation of motion for  $x$  is therefore  $x \ddot{x} + 2Ax = 2Mgh \sin^2 \alpha (n \cos \alpha - Mgh/A)$ .
