Filesize: 9.47 MB

Reviews

*A very awesome book with perfect and lucid reasons. It really is basic but shocks within the 50 percent of the book. Its been designed in an exceptionally easy way and is particularly merely right after i finished reading this ebook where in fact changed me, change the way i think.

SMALLER CHEMICAL ANALYSIS

To download **Smaller chemical analysis** eBook, you should click the link under and download the ebook or get access to other information which might be related to SMALLER CHEMICAL ANALYSIS ebook.

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 46 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1906 edition. Excerpt: . . . CHAPTER VI REACTIONS OF THE METALS OF GROUP Mb Manganese, Mn Dry Reactions. --Manganese compounds, when heated in a borax bead in the oxidising flame, impart to the bead a violet or lilac colour. When heated in the reducing flame, the bead again becomes colourless. A more characteristic reaction is to fuse the manganese compound with KHO , or with NaO_3 and a little KN_3 or KC_3 upon a piece of platinum foil; the manganese undergoes oxidation, and a deep green-coloured mass is obtained, consisting of manganates of the alkali metals-- $\text{MnO}_2\text{Na}_2\text{CO}_3$ (from KC_3 or KN_3) $\text{Na}_2\text{MnO}_4\text{CO}_2$ Wet Reactions. --Of the common manganous salts, the chloride, $\text{MnCl}_2 \cdot 4\text{H}_2\text{O}$, and the sulphate, $\text{MnSO}_4 \cdot 5\text{H}_2\text{O}$, are soluble in water. In the crystallised state they have all a pink colour. Manganous salts which are soluble in water do not undergo atmospheric oxidation. NH_4HO , KHO , and NaHO produce a white precipitate of manganous hydroxide, $\text{Mn}(\text{HO})_2$. Insoluble in excess of the reagent, the precipitate quickly absorbs oxygen, and is converted into hydrated manganic oxide, $\text{Mn}_2\text{O}_3 \cdot \text{H}_2\text{O}$, having a brown colour. Freshly precipitated $\text{Mn}(\text{HO})_2$, while still white, is soluble in NH_4Cl ; therefore in the presence of NH_4Cl , manganous hydroxide is not precipitated by NH_4HO , and only incompletely by KHO or NaHO . The ammoniacal solution of the double chloride, however, is capable of absorbing oxygen just as the precipitated $\text{Mn}(\text{HO})_2$ 1 The manganic salts are extremely unstable in solution, and do not exist under the ordinary conditions of analysis. does, and the liquid quickly...
